

MAVRO SYSTEMS · PRODUCT LINE OF MAVRO PROJECTS LLC

Weapon-mounted sensors with a checkable custody trail

Mavro Systems builds weapon-mounted sensing and logging for U.S. government buyers who need a clear, reviewable record of who had a weapon, when it was issued or returned, and when a shot was logged. Law enforcement and military stay on separate systems and datasets.

01 · COMPANY OVERVIEW

Holding company and product tip

Mavro Projects LLC is a Delaware company registered for federal procurement. Mavro Systems is the lead product line: weapon-mounted sensors, mesh-linked shot records, and an exportable custody timeline for command review. Other company lanes (Intelligence, Defense) exist; Systems is the tip of the spear today.

02 · PROBLEM / NEED

Commanders need checkable custody of weapon-mounted kit

When a weapon leaves the armory, when it is handed to an operator, when a round is fired, and when the weapon returns, those events often live in separate notebooks, radio logs, or after-action files. Commanders need one place to answer: who had it, when it was issued and returned, and when a shot was logged, with time, place, and motion context that can be replayed and exported.

03 · CORE OFFERING

What Mavro Systems delivers

Weapon-mounted sensors

Hardware on the weapon that captures shot events with time, place, and motion for later review.

Custody and replay trail

Issue, take-out, shot, return, and export events stay on one timeline reviewers can verify.

Mesh-linked shot records

Records move over a local mesh and can reach command nearly live, not only as a one-off dump.

Separate LE and military lines

Law enforcement and military product lines stay on distinct systems and datasets by design.

04 · DIFFERENTIATOR

Weapon-mounted sensing plus custody

The stack is built around the weapon itself: sensing at the point of fire, a mesh path to command, and a custody trail for issue, use, and return. It complements body-worn video and broader public-safety stacks without replacing them. Reviewers get a checkable timeline tied to the weapon, not only to an operator camera.

05 · CUSTOMERS / BUYERS

U.S. LE and military buyers

Primary buyers are U.S. law enforcement and military organizations evaluating field trials and program fit. Briefings for qualified government and partner contacts are available through info@mavroprojects.com.

06 · OPERATING PRINCIPLES

How we work while the product is in build

Lab demos labeled

Demonstrations are marked as lab work. Field claims wait on field evidence.

Honest build stage

Sensor hardware, mesh logging, and the exportable custody timeline are in active build.

LE is not military

Police and military stay on separate systems and datasets. No shared production data plane.
